Technical English literature also abounds in terms, which were formed by adding individual words, but being in a terminological relationship may denote a single concept, for example: sliding bearing - sliding support, correction for displacement - correction for displacement.

There can be also such cases as: treatment of water - treatment of water, and water treatment - treatment of water, that is, these two as if the same combination of terms have different semantic designations, and, accordingly, different understanding of the process technology. Check out our [Custom Writing Service](#) to get help with writing.

The same term can be found in technical English texts, but it is used in its translation in different semantic meanings depending on what field of technical knowledge it is used: aviation, navy, electrical engineering, etc.

In other words, a specific term has completely different meanings depending on its special purpose, for example: pocket has the following special meanings: air pocket (in aviation); environment (in military); dead zone (in radio); field socket (in geology); cable channel (in electrical engineering), and there are many such terms.

When working with a text, a translator should, as far as possible, avoid his or her own as if acceptable vocabulary, for example: industry is an industry, but not an industry, as a term that a translator can use.
